**Smart
Resourceful
Reliable**

Medical Specialists

HAMILTON provides informed solutions for areas like operating rooms, exam rooms, patient rooms, pharmacies, nurses' stations and reception stations, just to name a few. We address contemporary concerns like infection control, sustainability, optimized workflow, advancing technology and government regulation.

Our design and engineering experts continually communicate with our clients, the A&D community and end-users to ensure that our casework solutions are innovative and responsive to the needs of the medical environment.

Support Systems

All HAMILTON casework has:

- Sealed edges to eradicate wicking action
- Drawers that are easily removed for cleaning

Our exam room systems offer your choices of locked and unlocked storage designed for specialty items, counter heights set at optimal levels and bacterial-resistant solid surfacing with integrated sink bowls.

Dramatic Entrance

Make a grand statement with HAMILTON. We often work with clients to pair pieces from our standard line with custom components to build unique reception areas. Using our flexible manufacturing processes, we can design and build dramatic one of a kind reception stations.

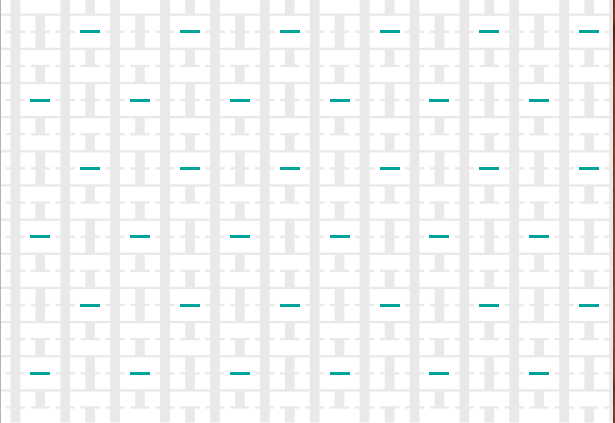

This approach also works for specialty needs. The cabinetry in the catheterization lab featured on the cover are standard casework with custom interiors designed to hold various sized catheters.

The Finer Points

We offer a wide variety of accessories and detailing that will tailor our casework to your specific requirements. The nurses' island from a hospital nursery shown here is a good example.

- Our kick plates allow sheet flooring to be applied right to the face creating a smooth cleaning surface and eliminating capillary action where mold and mildew can grow.
- Complex electrical wiring and plumbing are housed in raceways in the island. Clinicians have ready access to electrical outlets and convenient hands-free water.
- Splash guards around the sink prevent spray from getting to other areas of the station.

Flexibility

HAMILTON offers a wide range of standard finishes and hardware. We also utilize a wide range of materials specified by designers, such as solid surfacing, stainless steel, veneers, and phenolic worksurfaces. For the hospital pharmacy pictured on the right, we created a space for the staff pharmacists. Each pharmacist has their own area with personal secure storage to perform concentrated work and make phone calls. The cabinetry provided state-of-the-art durability and infection control.

Casework is our area of expertise. We know when new materials hit the market and incorporate them in our manufacturing process. We can help you design work spaces that are comfortable and inspirational.

Reconfigurable & Expandable

Although they look like built-ins, every piece of HAMILTON's modular casework can be moved and repurposed. Major equipment purchases are commonplace in medical applications. Modular casework is designed to accommodate change. For the pick area featured on the left, a new carousel will only require a minor reconfiguration with the addition of a few discrete components.

The Manhattan patient therapy room, pictured at right, was built to facilitate wheel chair use. We are proud of the durability of our casework. We back it with a lifetime guarantee. But if any damage does occur, individual pieces may be replaced without the need to tear out an entire wall of casework.

Healthy Workplaces

HAMILTON experts are available for consultation on any area of your casework project. We have decades of experience in all types of installations for medical environments. We can help you meet regulatory and sustainability requirements. We can help you design systems that support efficient workflows.

Custom Tailored

HAMILTON design services can help optimize your work space. In the Manhattan hospital exam room pictured above, we provided both open and locked storage designed specifically for a sports jacket and other items in a compact personal area for physicians. We also provided extra work surface space by incorporating a P-shaped top.

HAMILTON's medical projects are diverse. Our objective is always the same. We are dedicated to supplying custom-tailored casework that delivers a perfect fit, every time.

HAMILTON Solutions at Work

A wiring raceway provides electric and Ethernet network cabling along this reception console. Hidden from general view, the raceway is easily accessible to maintenance staff through removable panels.

HAMILTON Casework Solutions offer GREENGUARD Gold certified products to provide safe, quality, environmentally friendly workspaces. FSC and OSHPD certified components are also available as specified by a designer.
