MAKE THE MOST OF YOUR STORAGE SPACE

Vidir New Pan Carousel

Just when you realized that space is maximized when you store vertical, Vidir improves the process with the all-new Pan Carousel. The newest generation boasts improved stability and performance, as well as a variety of new options and accessories.

The productivity and efficiency of your business relies directly on the functionality of your facility. Poor storage and space solutions effect operations and productivity. At Vidir, our visionary team of engineers have revolutionized motorized storage solutions. Now for an affordable investment, your company can increase productivity, maximize storage and increase safety as well as security through the use of Vidir vertical storage Pan Carousels.

Increase Productivity

Increase the productivity of your facility with the new Pan Carousel from Vidir. Operations can be streamlined with the time-efficient auto retrieval system that brings the product to you. At the touch of a button, materials are easily and automatically located and retrieved thereby increasing productivity. Not only is time saved in the auto picking process but multiplied with employee productivity on other tasks. The optional pic-to-lite feature quickly directs the operator to the item being selected for additional time savings.

Maximize Storage

Take advantage of our small footprint, high-volume storage carousels to enhance your forgotten vertical space. Cube utilization allows you to improve storage without adding additional square footage. Maximizing your current space is more cost effective than additional storage space. Vidir Pan Carousels or 'vertical shelving carousels' bring the product to you via the shortest possible path. The nested shelving design ensures the highest possible storage density.

Safety And Security

The automatic retrieval nature of the fully enclosed system provides many intangible safety benefits including reduced accidents and related employee injury claims. In addition, the full enclosures and optional security gates on the new Pan Carousel help manage and control high cost inventory, reducing theft and shrinkage.

Utilize vertical storage technology to its fullest. For complete organization of products or materials, Vidir's new Pan Carousel creates high-density storage and retrieval solutions to fit a wide variety of applications.
